

## AGN-156A Salient

integrates the sodium light source, the polarimeter in one unit. You can read the circular scale directly from the scale reading and the scale reading and simultaneously **Pri** polarimeter is an instrument that measures the rotation of the plane of polarization of active liquids. It is used to determine the concentration and contents of substances. The polarizer produces plane polarized light passes through the sample substance.

analyzer to the eye. The shadow field can be observed. The optical rotation is measured with a

### Integrated Light

System: is a complete system associated with the instrument. It has been eliminated. Power measurement of Optical Specific Rotation of components are made. Aluminum and Stainless steel and a long trouble-free

with Integrated Light

Waveform Capture

at least 4X Stabilization

Power line voltage :

optical rotation : +/-

count : 0.050 . Mag

glass : 4 times . Sou

light) : 5893A0 . Wo

power : 20 W
